New cyclic peptides for treating infections with Staphylococcus aureus. Example; Page 22; 37pp; English.

This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus

The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Synergistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formations can medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              note= "note linked to residue 9 to form cyclic peptide"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New cyclic peptides for treating infections with Staphylococcus aureus.

The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AAMS0899-906). The peptide corresponds to the Staphylococcus aureus acreain using an Fmoc N-alpha protection strategy. Howas synthesised on a Wang-resin using an Fmoc N-alpha protection strategy. Following thin assembly, the peptide was cleaved from the support and the Ser-5 cresidue deprotected by treatment with a trifluoroacetic acid:anisole:water mixture (90:5:5) for 4 hr. The partially protected peptide-alpha carboxylates were then dissolved in DMF and treated with complete after 2 hr. The remaining protecting groups were then removed by treatment with HF and the peptide purified by HPLC. The cyclization was complete of inhibiting the agr response of Staphylococcus aureus. The thololactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure within alactone (as in the present case) or a lactam can desiroy agr response activating activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for chall interference, especially for the treatment of S. aureus
                                                                                               /note= "note linked to residue 5 to form cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AgrD2; agr response; inhibitor; antibiotic; antibacterial; infection;

The present sequence is that of a novel synthetic AgrD2 lactone cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactone bond. The peptide is derived from an AgrD2 peptide of staphylococcus aurents group II. AgrD2 is a secreted agr-encoded peptide, staphylococcus aurents group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aurens. The biological activity of the synthetic peptide was assayed using cultured S. aurens strains containing a beta-lactamase reporter gene fused to the agr promoter. This allowed activation or inhibition of the agr response of group IS. aurens strains without activating the agr response in group I, II or III strains. The invention cultivating the agr response in group I, II or III strains. The invention provides claimed cyclic peptides (see AAN50899-906 and AAN50999) and continued for provides for preparing them, especially peptides are useful for bacterial interference, especially for the treatment of S. aurens infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of a novel synthetic AgrD2 linear free acid peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured. S. aureus strains containing a beta-lactamase reporter gene fused to the synthetic peptide was assayed using cultured. S. aureus strains containing a beta-lactamase reporter gene fused to the synthetic peptide was unable to either cyclic peptide (see AAMS1001), the present peptide was unable to either at uM concentrations. The invention provides laimed cyclic peptides (see AAMS10899-906 and AAMS0899) and methods for preparing them. The cyclic peptides are useful for beaterial interference, especially for the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of a novel synthetic AgrD2 linear thioester peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrP3 promoter. This allowed activation or inhibition of the agr response cyclic peptide (see AMM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 at uM concentrations. The invention provides claimed cyclic peptides (see AMS0899-906 and AAMS0899) and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Staphylococcus aureus infection; cyclic peptide; AgrD; agr response;
                                                                                                                                                                                                                                                                                                                                                                           Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                              This sequence represents a cyclic peptide derived from the Staphylococcus aureus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that extivates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New cyclic peptides for treating infections with Staphylococcus aureus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating becterial growth and pathogenesis. Synegistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of staphylococcus aureus. An AgrD peptide is produced by S. aureus that extivates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ϋ́

The peptide is derived from an AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agr promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. The AgrD3 lactam peptide inhibited the agr response in group I S. aureus strains and did not provides claimed cyclic peptides (see AAMS0899-906 and AAMS0999) and methods for preparing them, especially where the cyclic bond is a lactam

The peptide corresponds to the Staphylococcus aureus AgrDII sequence with a Cys5 to diaminopropionic acid (Dpr) mutation (lactam). It was synthesised on a Wang-resin using an Fmcc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Dpr-5 residue deprotected by treatment with a trifluoroacetic acid:anisole.water mixture (90:5:5) for 4 hr. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "note linked to residue 5 to form cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "note linked to residue 9 to form cyclic peptide"
                                                                                                                                                                                                                                   Gaps
or lactone bond. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in a

partially protected peptide-alpha carboxylates were then dissolved in DWF and treated with PyBOP. Cyclization was complete after 2 hr. The remaining protecting groups were removed by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thiololactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure with a lactam (as in the present case) or a lactone can destroy agr activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of a novel synthetic cyclic peptide of the invention that is capable of inhibiting the agr response of Staphylococcus aureus. It is an AgrD-autoinducing peptide, where AgrD is a secreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. Preferred peptides may have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              'note= "note linked to residue 9 to form cyclic peptide"

the sequence NH2-X(n)-Z-X(y)-COOH, with a cyclic bond between the Z residue and COOH other than a thioester bond, where X is an amino acid, an amino acid analogue, a peptidominetic or non-amide isostere, Z is a synthetic or a biosynthetic amino acid, n is 0-10 and y is 1-10. The cyclic bond is especially a lactam or lactone bond. The thiololactone cyclic bond is especially a lactam or lactone bond. The thiololactone at response. Elimination of the thiol ester component of the cyclic ring structure can destroy agr response activating activity while preserving cand enhancing inhibitory activity. A claimed method of preparing a cyclic peptide involves: assembling a linear peptide chain on to a solid phase resin support; deprotecting the resulting protected assembled peptide; treating the deprotected peptide with neutral buffer for a time sufficient to form the cyclic peptide and cleave the peptide from the support; and recovering the cyclic peptide. The peptide is useful for becterial interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABP53540 to ABP53547 represent cyclic peptides (I) from the present invention. The present invention also describes a method for treating
                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cyclic peptide, Staphylococcus aureus, infection, antibacterial; agr response inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cyclic peptides, useful for treating Staphylococcus aureus infections.
                                                                                                                                                                                                                                                                                                                   ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This novel peptide sequence (or it's analogue) inhibits agr-rnalII transcription in Staphylococcus aureus (S. aureus), and is 9 amino acids long. The peptide can be added to pharmaccutical compositions to treat or prevent infections or diseases caused by S. aureus in animals, and especially in humans. They can also be combined with traditional antibiotics. S. aureus conditions ranging from abscesses (boils and furuncles) to life-threatening infections e.g. endocarditis, pneumonia, osteomyelitis, by secreting injurious proteins, or virulence factors. The synthesis of virulence factors is controlled by the agr. regulator, which activates transcription of the agr-rnalII gene to produce RNAIII, which induces transcription of the genes encoding the virulence factors. The peptides inhibit agr-rnalII transcription in and therefor virulence factor expression. The peptides can also be used in vitro to prevent Staphlococcus aureus colonisation
                                                                                                                                                                                                                                                                                                                                                                                                                                              Transcription inhibitory peptide; inhibition; antibiotic; abscesses; endocarditis; pneumonia; osteomyelitis; virulence factor; agr regulator; agr-rnaIII gene; colonisation.
Staphylococcus aureus infection comprising the administration of a composition comprising (I). (I) has ancibacterial activity, and can be used as an agr gene response inhibitor. The peptides are useful for treating S. aureus infections
                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide inhibiting agr-rnaIII transcription in Staphylococcus aureus useful to treat S. aureus infection.

TOO 2404

Drobable beta-glucosidase homolog F4I1.30 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Species: Os Mar-1999 #sequence_revision 05-Mar-1999 #text_change 09-Jul-2004
C;Accession: T02404; B84879
R;Rounsley, S.D.; Lin, X.; Ketchum, K.A.; Crosby, M.L.; Brandon, R.C.; Sykes, S.M.; Kaul Submitteed to the BMED Data Library, May 1998
A;Poescription: Arabidopsis thaliana chromosome II BAC F4I1 genomic sequence.
A;Reference number: 214667
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A;Status: translated from GB/EMBL/DDBJ

A;Title: Isolation and characterization of the chicken homeodomain protein AKR.
A;Accession. SS8440; MUID:95396587; PMID:7667102
A;Accession. SS8440.
A;Scatus: nucleic acid sequence not shown
A;Scatus: nucleic acid sequence not shown
A;Molecule type: mRNA
A;Residues: 35-94 *RYFF>-
A;Cross-references: EMBL:U25353
C;Function:
A;Description: negative regulator of apoVLDLII (major egg yolk apolipoprotein)
A;Description: negative regulator of apoVLDLII (major egg yolk apolipoprotein)
A;Note: expressed in liver during early embryogenesis and in non-hepatic adult tissues
C;Superfamily: homeobox homology
C;Keywords: DNA binding; homeobox; nucleus; transcription regulation
F;36-95/Domain: homeobox homology < HOX>
C;Keywords: DNA binding; homeobox nonlogy < HOX>
C;Keyword

```
This sequence represents a cyclic peptide derived from the Staphylococcus aureus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "N-terminal residue forms bond with C-terminal residue to form a cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Staphylococcus aureus infection; cyclic peptide; AgrD; agr response; virulence factor; treatment.

    aureus peptide #2 used for bacterial interference.

It is an AgrD-autoinduring peptide, where AgrD is staphylococcus aureue. It is an AgrD-autoinduring peptide, where AgrD is secreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins the sequence NH2-X(n)-Z-X(y)-COM, with a cyclic bond between the Z residue and COOH other than a thiosester bond, where X is an amino acid analogue, a peptidomimetic or non-amide isosters, Z is a namino acid analogue, a peptidomimetic or non-amide isosters, Z is a synthetic or a biosynthetic amino acid, n is 0-10 and y is 1-10. The cyclic bond is especially a lactam or lactone bond. The thiololactone structure within native AgrD peptides is required for activation of the structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic

The present invention also describes a method for treating Staphylococcus aureus infection comprising the administration of a composition comprising (I). (I) has antibacterial activity, and can be used as an agr gene response inhibitor. The peptides are useful for
peptide involves; assembling a linear peptide chain on to a solid phase resin support; deprotecting the resulting protected assembled peptide; treating the deprotected peptide with neutral buffer for a time sufficient to form the cyclic peptide and cleave the peptide from the support; and recovering the cyclic peptide. The peptide is useful for bacterial interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cyclic peptide, Staphylococcus aureus; infection; antibacterial; agr response inhibitor.

This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                        New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Surette MG;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Autoinducer-2; AI-2; antibiotic; antibacterial; dermatological; vulnerary; pheromone; agr system; accessory gene regulator; cyclic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New cyclic peptides for treating infections with Staphylococcus aureus.

                                                                                                                                                                                                                                                                  ö
                                                                                            antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Synergistic antibiotic compositions compositions compositions are also provided. Methods using such Al-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and buffilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of periode-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      'note= "note linked to residue 9 to form cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "note linked to residue 5 to form cyclic peptide"
                           Use of autoinducer-2 agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis, also antibiotic compositions.
                                                                                                                                                                                                                                                                  Gaps
                                                                                      The invention relates to the use of autoinducer-2 (AI-2) agonists
                                                                                                                                                                                                                                                                                                                                                                                                                                Staphylococcus aureus; AgrD; agr response; inhibitor; antibiotic; antibacterial; infection; therapy; cyclic.
                                                                                                                                                                                                                                                                  .

The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AAMS0899-906). The peptide corresponds to the Staphylococcus aureus agreeme with a CyS5 to Ser mutation (lactone). It was synthesised on a Wang-reain using an Froc N-alpha protection strategy. Following con a mang-reain using an Froc N-alpha protection strategy. Following confaintsole. We treatment with a trifluoroacetic acid:anisole. Water mixture (90:5:5) for 4 hr. The partially protected peptide acatoxylates were then dissolved in DMF and treated with complete after 2 hr. The remaining protecting groups were then removed by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thiololatone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure within alatone (as in the present asse) or a lactam can destroy agr response activating activity while preserving and canadian inhibitory activity. The cyclic peptides are useful for changed in the freezent of S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               'note= "note linked to residue 9 to form cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "note linked to residue 5 to form cyclic peptide"

The present sequence is that of a novel synthetic AgrD2 linear free acid peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylosocous aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured so aureus strains containing a beta-lactamase reporter gene fused to the agrs promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at un concentrations. The invention provides claimed cyclic peptides are useful for bacterial interference, especially for the peptides are useful for bacterial interference, especially for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AgrD2; agr response; inhibitor; antibiotic; antibacterial; infection;
                    Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in a subject.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of a novel synthetic AgrD2 lactone cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactone bond. The peptide is linked to residue 9 via a lactone bond. The peptide is derived from an AgrD2 peptide 6 staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide. Expaphylococcus aureus strains responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agricultured specifically. The lactone AgrD2 peptide inhibited the agr response of group I S. aureus strains without activating them a response of group I S. aureus strains without provides claimed cyclic peptides (see AAMS0899-906 and AAMS0899) and methods for preparing them especially peptides where the cyclic bond is a linterference, especially for the treatment of S. aureus infection.

The present sequence is that of a novel synthetic AgrD2 linear thioester peptide. The peptide is derived from the cyclic AgrD2 peptide of Stapplylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agr promoter. This allowed activation or inhibition of the agr response to be monitored spectropherometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at um concentrations. The invention provides claimed cyclic peptides are useful for bacterial interference, especially for the cyclic peptides are useful for bacterial interference, especially for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a cyclic peptide derived from the Staphylococcus aureus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Staphylococcus aureus infection; cyclic peptide; AgrD; agr response; virulence factor; treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides and peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus, An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New cyclic peptides for treating infections with Staphylococcus aureus.

The present sequence is that of a novel synthetic AgrD2 lactam cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a car datem bond. The peptide is derived from an AgrD2 peptide of Jactam bond. The peptide is derived from an AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other controls proteins responsable for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured of S. aureus strains containing a beta-lactamase reporter gene fused to the agr spromoter. This allowed activation or inhibition of the agr response in group I S. aureus strains and did not activate the agr response in group I S. aureus strains and did not continued for provides claimed cyclic peptides (see AAMS0899-906 and AAMS0899) and continued for preparing them, especially where the cyclic boptides continued for preparing them, especially where the cyclic boptides can use useful for bacterial interference, especially for the treatment of S. aureus infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Synergistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or bidfilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and bygiene. The present sequence represents a inhibitor of personal hygiene. The present sequence represents a inhibitor of peptide-mediated quorum sensing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of autoinducer-2 agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis, also antibiotic compositions.

The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AANSOB99-906). The peptide corresponds to the Staphylococcus aureus AANSOB99-906. The peptide corresponds to the Staphylococcus aureus aprent in was synthesised on a Wang-reain using an Func N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Dr-5 residue deprotected by treatment with a trifluoroacetic acid-anisola-water mixture (90:5:5) for 4 hr. The created with PyBOP. Cyclization was complete after 2 hr. The reated with PyBOP. Cyclization was complete after 2 hr. The remaining protecting groups were removed by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the capture of Staphylococcus aureus. The thiololactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure with a lactam (as in the present case) or a lactone can destroy agr response activating activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for bacterial interference,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novick RP, Beavis R,

Toffice Toffice Teststance protein 1 homolog - barley
C,Species: Hordeum vulgare (barley)
C,Species: Hordeum vulgare (barley)
C,Accession: Toffics
R,Cocession: Toffics
R,Davies, T. G.E.; Theodoulou, F.L.; Hallahan, D.L.; Forde, B.G.
Gene 199, 195-202, 1997
A,Fitle: Cloning and characterization of a novel P-glycoprotein homologue from barley.
A,Reference number: 215500; MUID:98019088; PMID:9358056
A,Accession: Tofics
A,Residues: 1-1232 cDAV
A,Cross-references: UNIRROT:023998; EMBL:Y10099; NID:92292906; PIDN:CAA71179.1; PID:922
A,Resperimental source: cv. Maris Mink
C;Superfamily: multidrug resistance protein; ATP-binding cassette homology
F;381-575/Domain: ATP-binding cassette homology cABC>
